

# PAYTRIUM

EFTPOS ON YOUR  
POINT OF SALE

When you're a small to medium sized business owner it's the little things that affect your profit. For example, a staff member keys the wrong amount into the EFTPOS terminal and the customer heads home with a bargain. The EFTPOS network fails and you can't process the sale. You have to pay for a phone line for each EFTPOS terminal. Or, you have to deal with impatient customers as they wait to pay you.

Paytrium links with your point of sale software to bring you a superior EFTPOS solution. It eliminates staff keying errors on EFTPOS terminals. It allows you to keep processing a sale when

the EFTPOS network is not available. And it gives you the choice of either using Broadband or only one phone line for multiple EFTPOS terminals. This all means you can give your customers an improved payment experience.

Paytrium uses a plug 'n play process to be up and running on your point of sale within minutes.

With Paytrium you'll spend less on everyday expenses and have more time to focus on what's really important to your business - your profits.

## BUSINESS BENEFITS

### Improve your customers' experience

Your staff will only need to enter the purchase amount once into the point of sale meaning the customer will spend less time waiting at the counter. The transaction will be accurate and faster. Paytrium gives you the choice to offer your customers acceptance of loyalty and gift cards.

### Always receive payment

Paytrium lets you define a number of ways to allow your staff to continue accepting card payments if the EFTPOS network fails. If payment is declined, Paytrium will stop the transaction and let your staff member know via the point of sale. This will make sure you always receive payment.

### Spend less on everyday expenses

With Paytrium you can choose to use your current network to process EFTPOS transactions. This means you won't need to spend more on extra phone lines. Paytrium also allows you use one printer for the point of sale and EFTPOS receipts, saving you maintenance and paper costs. And this will give you more counter space to display the products you want to sell.

### Save on installation costs

Paytrium is installed on your point of sale using a plug 'n play process. You can configure the software to your preferences and train your staff within minutes. Paytrium allows you to diagnose any issues with your EFTPOS network using the tools provided. With telephone support available 24 hours, 7 days a week, you'll always have access to a team of experienced people to assist with any problems you may have.

### Reduce your time spent on paperwork

Paytrium helps you to quickly match your point of sale transactions to your bank settlements. The Paytrium journal records all the EFTPOS transactions meaning you don't have to keep paper merchant receipts. Using the search function in Paytrium you'll be able to quickly locate receipts when you need to and convert them to Excel format for custom reports.

### Process customer payments securely

Paytrium is certified to meet banking security standards, including EMV. Customers can present a card for payment without the risk of skimming. This gives you and your customers increased protection and confidence against card fraud.

# FEATURES
